TOX® ElectricDrive Core

TOX® EdgeUnit

The TOX® EdgeUnit works like a decentralized intelligence. It collects data at the place where they are recorded, and sends the bundled data digitally to the TOX® PowerModule Core.

General technical data

- Ambient temperature: 0 - 50°C
- IP protection: IP 65 (connector closed)
- Housing: aluminum
- The status LED shows different statuses of the TOX® EdgeUnit
- Integrated memory

Designation	Interfaces
X1	EtherCAT IN, including status LED
Connection type	M12 4-pin bushing, D-coded
X2	EtherCAT OUT, including status LED
Connection type	M12 4-pin bushing, D-coded
X3	Supply voltage
Voltage	+ 24 V DC (18 - 28 V DC)
Current consumption	US1 <0.25 A (without loads on Pin1, X4-7) US2 ~0 A (without outputs to X7)
US1	Logic voltage + sensors
US2	Output voltage (not isolated)
Connection type	M12 5-pin, connector A-coded, not AIDA compliant

Designation	Interfaces
X4	Digital IN
Digital IN 1 / Digital IN 2	24 V DC
Logic level 0 (LOW)	0 V - 10 V
Logic level 1 (HIGH)	16 V - 28 V
Input current	max. 2 mA (at 24 V)
Connection type	M12 5-pin bushing, A-coded
X5*	Strain gauge 2
measuring range	1.157 mV/V to 3.25 mV/V (adjustable gain)
Voltage VDC	5 V
Bridge resistance	700Ω
Resolution	16 bit
Connection type	M12 5-pin bushing, A-coded
X6*	Analog IN
Analog IN 1	-10 - 10 V DC, 16 bit
Analog IN 2	0 - 10 V DC, 12 bit
Connection type	M12 5-pin bushing, A-coded
X7	Digital OUT
Digital OUT 0 / Digital OUT 1	24 V DC, US2
Output current	max. 2 A (per channel) / excess current and short-circuit safe
Connection type	M12 5-pin bushing, A-coded
X8*	Encoder
Connection type	M12 8-pin bushing, A-coded
X9	Service plug
Connection type	M12 8-pin connector, A-coded

* We would be happy to supply you with compatible sensor types upon request.

TOX® ElectricDrive Core

TOX® PowerModule Core

The TOX® PowerModule Core is required for operating the drive as well as for parameterization and visualization.

Properties

- Fast commissioning (plug & play)
- Open parameterization, comprehensive programming and diagnostic functions
- Definition of process jumps, i.e. with flexible response to abort events, functions can be skipped.
- Configuration of multiple conditions
- Configuration, definition and querying of variables
- 500 processes and 8000 functions
- Mathematical and calculation functions are available
- Switching to external force sensors and/or external linear position sensor during travel is possible
- Hold force, regulate force
- Predefined sample processes
- Window and envelope monitoring
- Freely definable rework/recovery
- Definable transition speed from one movement function to the next

The server controller is available as extended safety version as an option.

No	Designation	Description
1	Power supply connection	Power supply
2	24 V supply of control electronics	Connection for the control electronics
3	System bus (internal) IN	EtherCAT input (internal communication)
4	System bus (internal) OUT	EtherCAT output (internal communication)
5	Basic Safety-STO	<p>The integrated safety technology offers the control and drive prerequisites for the implementation of protective functions.</p> <ul style="list-style-type: none"> ■ Safe shutdown of the energy supply for the servo controller output stage (STO) in PLe. TOX® ElectricDrive Core

No	Designation	Description
7	Ethernet	<p>Connection to the TOX® Software</p> <ul style="list-style-type: none"> Connection to TOX® UDI Panel, or Line IPC (customer), where the TOX® Software can be installed. The TOX® Software must be used for initial parameterization. During production a higher control system (customer PLC / robot) can be used as alternative for driving, or process data adjustment for example. The TOX® Software is used to store the quality data on an IPC or a freely definable location, or can be passed on. Process backups are/can be created automatically.
8	Connection of motor and brake resistor	<p>Connection for motor and brake resistor.</p> <p>The brake resistor is a load resistor.</p> <ul style="list-style-type: none"> It transforms excess motor brake energy to heat. The resistor is installed on the control cabinet by default since it generally does not get hot during standard processes (internal brake resistor). The brake resistor can optionally also be installed outside of the control cabinet for improved heat dissipation (external brake resistor). For the larger drives, only an external brake resistor is provided due to the high heat development.
9	Connection of motor holding brake	For optional equipment: connection for the motor holding brake and brake voltage from a separate mains adapter.
10	Resolver	Phase angle determines the motor position.
11	Memory card	<p>Contains the entire TOX® know-how</p> <ul style="list-style-type: none"> Application and process sequence The process sequence can be programmed by the customer.
12	Status of LED converter	
13	Connection of fieldbus (either Profinet, EtherNetIP or EtheCAT)	<ul style="list-style-type: none"> Interface to the PLC /to the robot Program selection, signal exchange, start Move to PLC values as well as program numbers and parameters, such as force and speed for example. Data scope can be defined application-specific: 32 words (switch-over possible) Final values, actual values (force/position/window results) Part serial information from the PLC to the servo controller (96 digit ASCII string)
14	See flexible fieldbus interface	
15	DC bus	Optional possibilities of connection for intermediate circuit.

Flexible fieldbus interface

The interface can be flexibly designed:

- Independent of hardware
- No prioritized function modules for PLC manufacturers necessary
- Data scope can be defined application-specific: 32 words, switch-over possible
- FIXED TABLE, 10 words
- SWITCHING TABLE, max. 16 x 22 words (e.g. PLC values, final values of window results, part information, freely configurable pages,)
- Move to PLC standard values independent of PLC type

TOX® ElectricDrive Core

Overview of sizes TOX® PowerModule Core

Conditions for use

- Operating temperature: -10 to +55 °C
 - Operation at switching frequency 2 or 4 kHz: Via +45 °C
Reducing output measurement current by 2.5%/°C.
 - Operation at switching frequency 8 or 16 kHz: Via +40 °C
Reducing output measurement current by 2.5%/°C.
- Setup height
 - 0 ... 1,000 m via NN: Without current reduction.
 - 1,000 m via NN: Reducing output measurement current by 5%/1,000 m.

For TOX® ElectricPowerDrive	Rated power	Size	Size Dimensions (H x W x D)	Weight	Pre-fuse (not included in delivery)

Brake resistor

- | | | | |
|---|----------------------------------|---|----------------------------------|
| 1 | Size 1 (internal brake resistor) | 2 | Size 2 (external brake resistor) |
| 3 | Size 3 (external brake resistor) | | |

The brake resistor is a load resistor.

- It transforms excess energy to heat. The resistor is installed in the control cabinet by default (internal brake resistor).
- The brake resistor can optionally also be installed outside of the control cabinet for improved heat dissipation (external brake resistor). Additional cooling of the control cabinet might not be necessary under certain circumstances.
- For the larger drives, only an external brake resistor is provided due to the high heat development.
- For brake resistance size 2 and 3 no cable set is supplied.

TOX® ElectricDrive Core

Safety equipment

Motor holding brake and safety brake

The drive systems are very effective and for this reason have a low self-retention, i.e. the tool can drop down when power is lost. The maximum permissible tool weights can be found in the technical data sheets of the TOX® ElectricPowerDrive.

Dropping can be prevented with weights in excess of these with the aid of a separate brake.

Two different types of brakes are available.

- Motor holding brake (integrated in the motor)
- Safety brake (installed on the TOX® ElectricPowerDrive)

Motor holding brake (integrated in the motor)

When power is lost, and also with a vertical facility, the motor holding brake prevents the weight-loaded working piston from dropping. It protects the drive, the tools and the workpieces against damage. The motor holding brake is connected by means of the motor cable included in the cable set. A separate supply voltage is required on

the TOX® ElectricDrive Core for the motor holding brake. A motor holding brake is not available for the TOX® ElectricPowerDrive type EXe-L.

The motor holding brake does not function as a safety brake.

Safety brake (installed on the TOX® ElectricPowerDrive)

The TOX® ElectricPowerDrive EQe-K, EXe-K, EXe-L can be fitted with a safety brake. During a malfunction it stops the TOX® ElectricPowerDrive. The functionality of the brake is checked prior to every cycle.

The safety brake for the drive types EQe-K, EXe-K and EXe-L is designed as spring-loaded brake. When the power is switched off, the brake and the drive, or the dynamically loaded working piston stop.

The parameters are already preset in the brake switch module according to the size of the safety brake.

TOX® ElectricDrive Core

Delivery of the safety brake

Fig. 1 Safety brake, brake switch module, cable

Scope of delivery

Safety brake	Size in dependence of the size of the TOX® ElectricPowerDrive.
Brake switch module	For TOX® ElectricPowerDrive, type EQe-K, EXe-K, EXe-L
cable	5, 10, 15, 20 or 25 m long cable from the safety brake to the brake switch module. It can be connected to the safety brake and has an open cable end on the other side. The cable can be shortened during the installation.

Performance data of safety brake

Drive	Brake	Rated voltage	Rated power	Brake switch module Dimension (H x W x D)
EQe-K 002	RSM 2	16 V*	16 W	100 x 45 x 120 mm

EXe-L 500	RSM 500	24 V	143 W	
EXe-L 700	RSM 500	24 V	143 W	
EXe-L 1000	RSM 500	24 V	143 W	

(*) internal voltage drop in the brake switch module.

TOX® Software

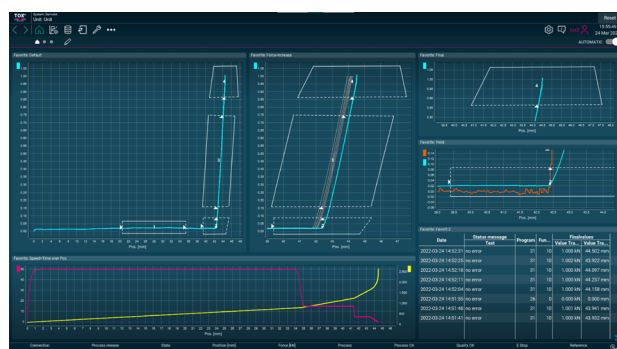

The TOX® Software is necessary for the parameterization of the system.

It includes all required functions for fast and simple configuration, parameterization, visualization and diagnosis of the servo drive systems.

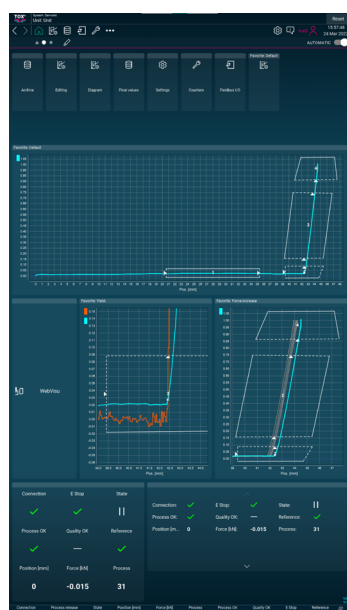

View: integrated archive

View: freely designable dashboard, landscape format

View: freely designable dashboard, portrait format

Properties:

- Flexible screen layout (dashboard)
- Intuitive operation
- Network based (Ethernet TCP/IP)
- Multiple login levels for user management and security
- Powerful functions
- Adjustable to customer-specific requirements
- Data backup, data export of quality data (xml, csv, json, pdf)
- Multilingual
- In-house engineering

System Requirements

The requirements for the customer PC depend on the number of TOX® ElectricDrive Core systems and function parameters/conditions.

Supported operating systems:

- Microsoft® Windows 10® and higher
- Ubuntu MATE 22.04 LTS and higher

Up to 3 TOX® ElectricDrive Core systems:

- min. i3, 7th Generation
- 8 GB Ram
- 120 GB SSD

Up to 10 TOX® ElectricDrive Core systems:

- min. i5, 7th Generation
- 16 GB Ram
- 240 GB SSD

The information applies to all the following functional requirements:

- 2 channel
- 2 s cycle
- 1000 x/y points
- 5 windows per channel
- Including data transfer of the standard data object

Window functions

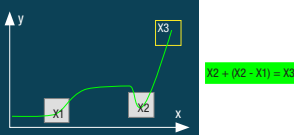

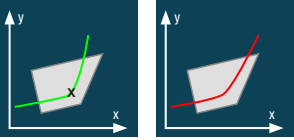

The window functions offer an integrated full-value process monitor for every piece part. There are numerous options via the flexibly adjustable windows.

General information

The window function consists of 5 or 10 freely definable windows per channel depending on the control system version. Every channel has an x-, y- and time track.

For your quality assurance, up to 5,000 diagram points are available per track depending on the duration of recording.

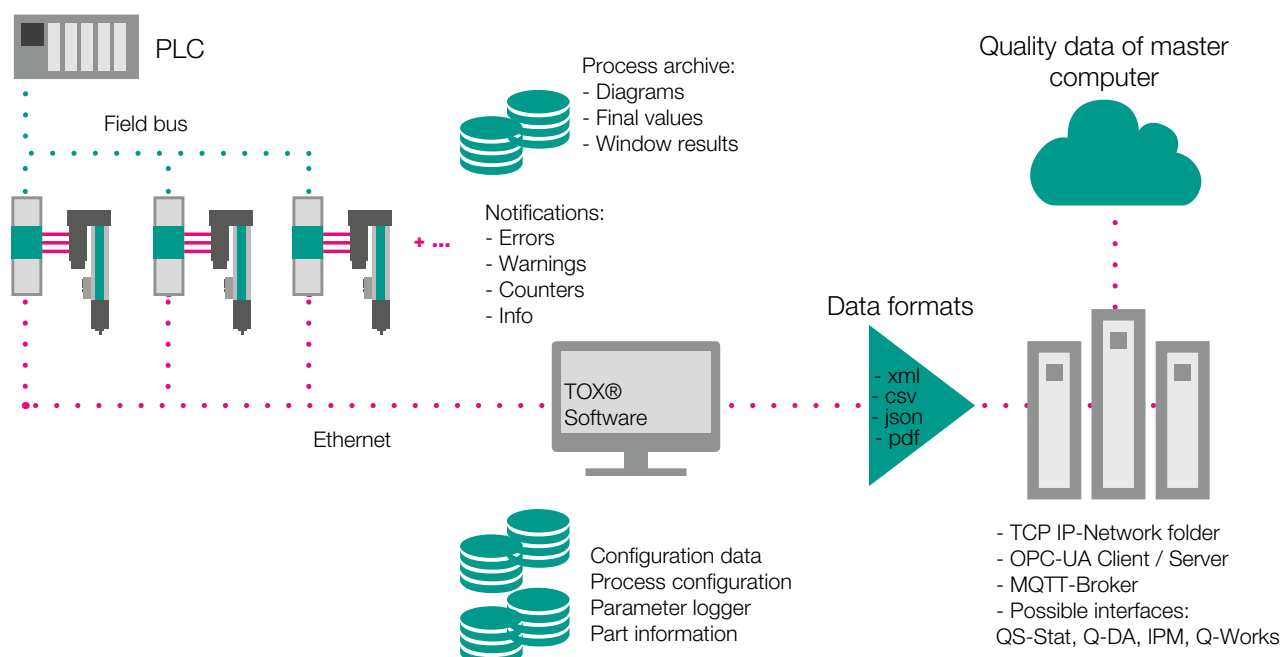

Window illustration

		Designation	Explanation	Application
	OK	Entry and exit	The entry and exit sides of the window are freely definable and are monitored.	Force-displacement monitoring during the pressing of elements
	NOK			
		Calculation	One calculation operation is performed with two process values that can determine a new target window.	Measuring piece parts during pressing
	OK	Must contact	The curve must contact the set window.	Force-displacement monitoring during the pressing of elements
	NOK			
	OK	Extended lines	The lines specify the corridor. The force-displacement line must enter the window past the lines (saving of 2 windows).	Force-displacement monitoring during the pressing of elements
	NOK			
	OK	Break point detection	The slope must reach a defined value. This is stored and is relevant for the execution of further motion.	Pressing with force at piece part fluctuations
	NOK			
	OK	Digital input	A defined digital signal must be triggered in the area of the window.	Monitoring of sequential processes such as prevention of collisions
	NOK			

		Designation	Explanation	Application
<div>OK</div> 	<div>NOK</div> 	Integral	Calculation and evaluation of the area below the curve.	Monitoring, for example, of the energy introduced in a piece part
<div>OK</div> 	<div>NOK</div> 	Intersection within windows	The defined line (x or y) must be crossed within the window. The value is recorded.	Detecting the position of the excess of force
<div>OK</div> 	<div>NOK</div> 	Hysteresis	Evaluates the hysteresis (x or y) between an advancing or retracting curve.	Detection of a permanent deformation of a piece part
<div>OK</div> 	<div>NOK</div> 	Load drop	A target value, determined by the difference of both lines, must be reached.	Break of piece part during joining
<div>OK</div> 	<div>NOK</div> 	Time monitoring	Monitoring the time between entry and exit.	Check of time functions such as filling of liquids
<div>OK</div> 	<div>NOK</div> 	Average value	An average value is calculated and monitored within the window.	Check of the average force that is introduced in a piece part
<div>OK</div> 	<div>NOK</div> 	Peak point	A peak value must be reached within a window.	Monitoring a maximum such as a slot in a piece part
<div>OK</div> 	<div>NOK</div> 	Differential average value	Calculation of differentials between entry and exit of the window.	Evaluation of fit tightness on a piece part
<div>OK</div> 	<div>NOK</div> 	Differential of current values	The actual slope is constantly recorded and evaluated (deviation).	Evaluation of fit tightness on a piece part

TOX® Software

Quality data

Seamless quality assurance can be carried out. We offer the most flexible integration into the database and/or to the management/production system.

5,000 diagram points are available per track. Final values, two intermediate values each with force and travel as well as minimum and maximum force/travel are recorded. The maximum and minimum

entry, exit and average of force/travel and the window results of the respective window functions are recorded.

- Different data formats, such as CSV, JSON, XML.
- Transmission protocols: TCP/IP, MQTT, FTP, OPC UA
- Data content: final value, diagram, drive data, device data, customer-specific data (i.e. part serial #)

Multi-channel capability

The multi-channel capability is an outstanding function of the TOX® ElectricDrive Core system.

- Closed loop monitoring: i.e. monitoring of the integrated measuring technology with redundancy
- 10 tracks per channel

- 5000 diagram points for each track
- Quality assurance via switchover to external transducers and additional machine parameters
- Evaluation of all parameters within a system

Transmission duration of quality data

Content of quality data

The quality data contain the following data packages:

- Quality data
- Final process values
- Curve data
- Window results
- Counters
- (message buffer if necessary)

Transmission time of quality data

The time of transmission depends on the target system on which the TOX® Software is going to be set. The time of the transmission also depends on the control system used.

That is why (independent of the target system) a minimum transmission time of approx. 1 second is specified.

It is recommended to adhere to the transmission time between two processes.

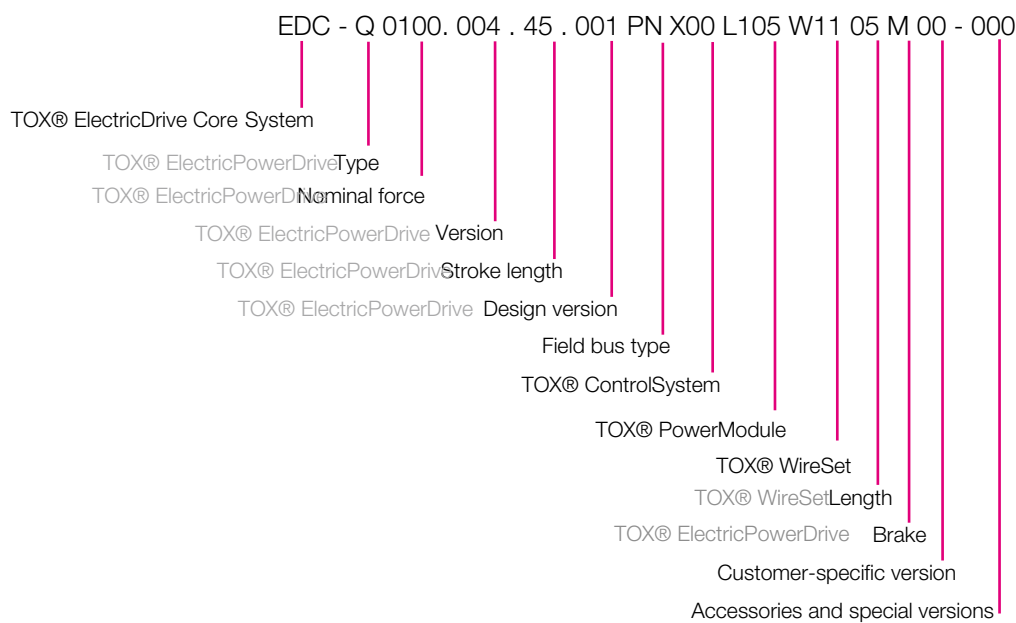

System key

The TOX® ElectricDrive Core system is available in many different versions.

The type key comprises all components of the system and its technical data, or characteristics.

The following table is used for the interpretation of key numbers and explains the number combinations.

Breakdown of type key

Designation	Description
System	Designates the entire system: EDC (TOX® ElectricDrive Core or EDA (TOX® ElectricDrive Advanced).
TOX® ElectricPowerDriveType	Designates the TOX® ElectricPowerDrive type, such as Q (EQe-K), X (EXe-K), F (EXe-F), L (EXe-L), R (EXe-R).
Nominal force	Indicates the nominal force in kN (nominal press force).
Version	Designates the TOX® ElectricPowerDrive version, such as <ul style="list-style-type: none"> 003 (basic model) 004 (safety brake, for the protection of persons) 005 (safety brake with rotary encoder, for safe speed) 006 (motor holding brake, for increased tool weight) 007 (holding times version min. of 10 s at min. 80% pressing at nominal force) 008 (safety brake version and holding time min. of 10 s at min. 80% pressing at nominal force) 011 (version identical to pressing/pulling at nominal force, punching) 012 (safety brake version and identical nominal force pressing/pulling, punching) 017 (motor with fan, for fast cycle times) 033 (increased speed) 053 (protection class IP65) 302 (working piston with frontal threaded holes) 303 (working piston with frontal threaded holes, with safety brake) 555 (clean room version according to ISO 14644-1 usable up to clean air class 5) 803 (short)
Stroke length	Indicates the stroke length in cm.
Design version	Indicates the TOX® ElectricPowerDrive design version.
Field bus type	Indicates the bus version used, such as PN (ProfiNet), EP (EtherNet IP), EC (EtherCat).
TOX® ControlSystem	Indicates the selection option of the PC (only for TOX® ElectricDrive Advanced).

System key

Designation	Description
TOX® PowerModule Core	Indicates the selection option of the controller (only for TOX® ElectricDrive Advanced).
TOX® WireSet	Indicates the selection option of the cable setup, e.g. halogen-free, robot/cable-track compatible.
TOX® WireSetlength	Indicates the cable length in m.
TOX® ElectricPowerDrive Brake	Indicates the brake type, such as X (no brake), M (motor holding brake), S (safety brake) or B (safety brake & motor holding brake).
Customer-specific version	Indicates the customer-specific version.
Accessories and special versions	Indicates the special versions.

Performance Level Kit

A performance level kit is available for the TOX® ElectricPowerDrive with safety brake. The performance level kit serves for the safe actuation of the safety brake according to performance level (PL) e. The performance level kit is certified according to Annex IX of Machine Directive 2006/42/EC (prototype test).

The performance level kit is a ready-to-use assembled and wired module, where only the 400 VAC and 24 VDC power supply and the safety signal need to be wired.

The Performance level kit consists of a mounting plate, terminals for the power supply, a safety PLC, a brake switching module and a TOX® PowerModule Core. The kit contains the complete control unit – all completely mounted on a mounting plate.

Advantages:

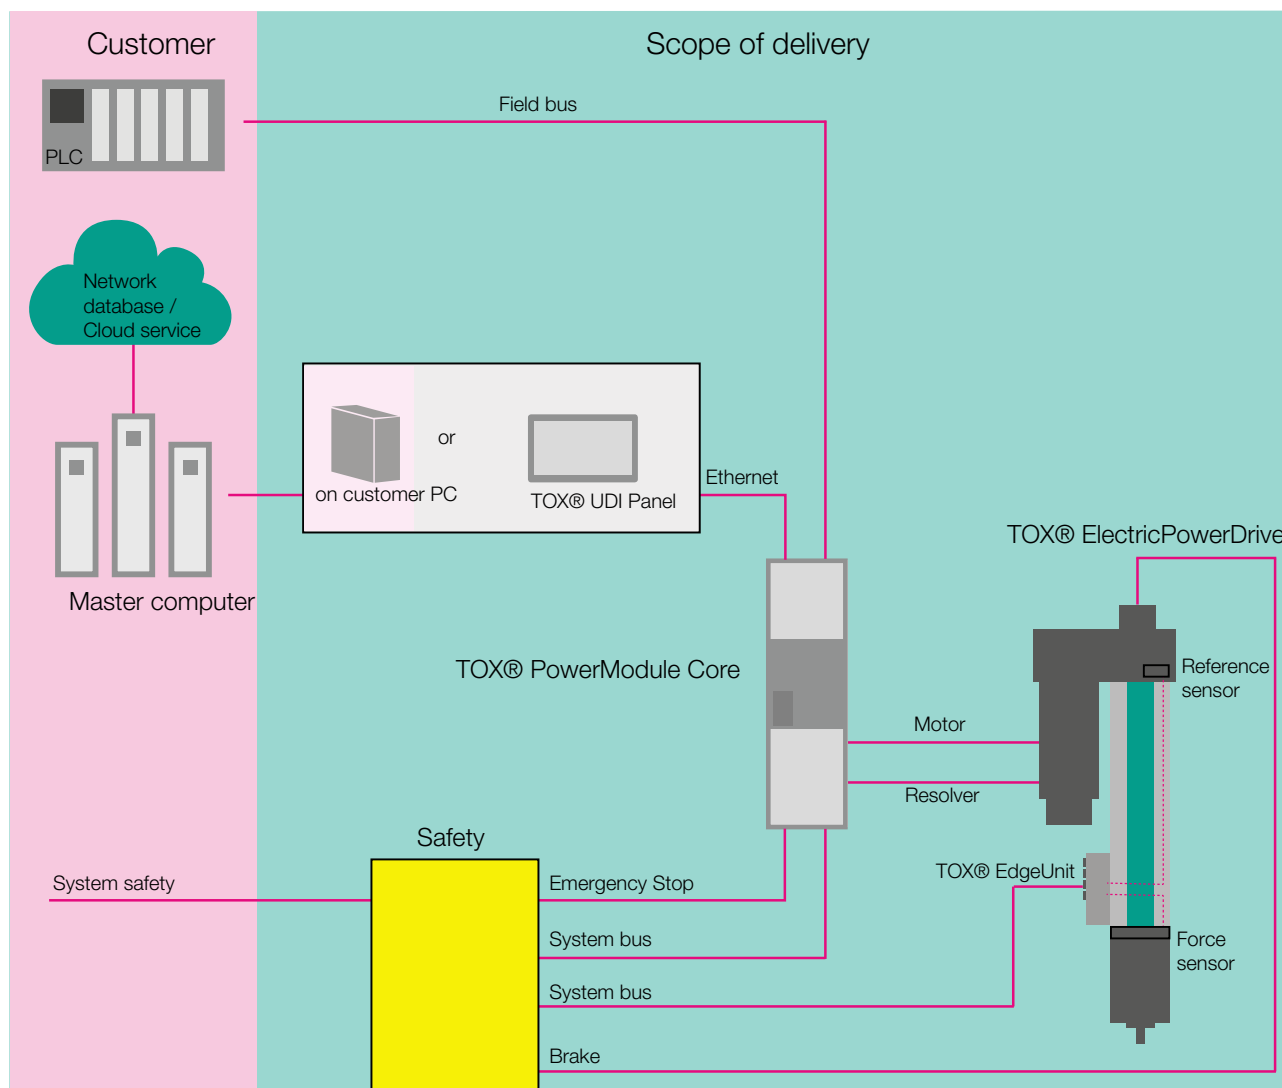

- No additional work for the customer
- Highest safety, Performance Level e
- Autonomous module – immediately ready for operation

Performance Level Kit

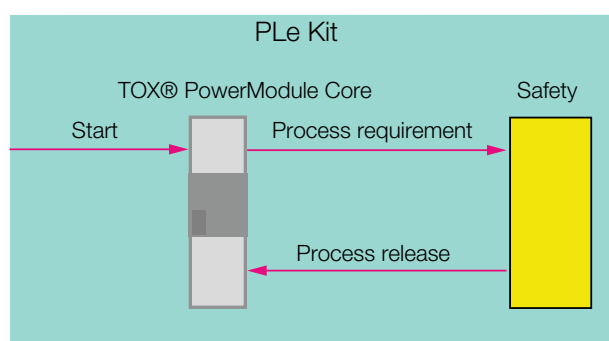

Schematic diagram

Control:

There are different ways how to control a start.

1. With the TOX® Software the TOX® ElectricPowerDrive can be moved via the standard buttons and processes started.
2. With the aid of the TOX® EdgeUnit a process can be started via the available digital inputs. The configuration and selection of the processes is to be performed via the TOX® Software.
3. A process can also be selected and started via the field-bus.

Function:

An external start is sent to the TOX® PowerModule Core. The safety control unit checks whether the safety is active before enabling the start. Only then is the process started.
